

# BM Tracking Bot — Cheat Sheet

All **/update** commands are sent as a **reply to the brief** in **Internal Network Ads**. The bot updates the Master sheet, the per-page sheet, the DB, and the brief copy in each per-page IG Ads chat (within 48 h).

## Edit a price

`/update price @hitsblunt $250`

Multiple pages, same price:

`/update price @hitsblunt @dailyhoodposts $200`

Different prices — one command per line:

`/update price @hitsblunt $250`

`/update price @dailyhoodposts $200`

`/update price @zer $100`

## Rename the campaign

`/update name New Campaign Name`

*Replaces the campaign name in Master sheet, all per-page sheets, the DB, and every per-page brief copy in chat.*

## Remove a page from a brief

`/update remove @oddlyhorrifying`

Multi-page:

`/update remove @page1 @page2`

*Deletes the bot's forwarded brief in that page's chat, the Master sheet row, the per-page sheet row, and the DB row — and subtracts the page's price from the brief total.*

## Manually edit one bot-sent message

`/editbrief https://t.me/c/<id>/<msg_id>`

`<new text on the next lines>`

*Get the link by right-clicking the bot's message in the per-page chat → Copy Link. Falls back to a two-message flow if pasting multi-line doesn't work in your client.*

## Check your submissions / submit a new ad

DM **@bm\_tracking\_bot** (Greg):

`/mystatus` — your last 10 submissions

`/mystatus <id>` — drill into one

`/ad` — opens the wizard for a new submission

## Gotchas

- **/update** must be a **reply** to the brief.
- Each **/update** line is an independent command — stack them in one message.
- Telegram only allows editing chat messages within **48 hours**. Sheet + DB updates still work past that; the chat copy stays as-is.
- **/update remove** is final — no undo.
- Bot prints a summary card with Master **N** · Per-page **N** · DB **N** · Chat edits: **N**. If a count is **0** where you expected **1+**, ping Connor.
